Description of Events:	This shipment was found to be leaking during the sort. Upon inspection of the contents by a DG Spill Speciailist it was found to contain a tube which said Hydrochloric Acid inside. I called the shipper who said they were sending water samples that had hydrochloric acid inside. They did not have a Material Safety Data Sheet that would have told me whether or not the current solution was or wasn't a dangerous goods. As the outer package had not been offered with any dangerous goods markings labels nor with a shipper's

Description of Events:	THIS UNLABELED AND UNMARKED PACKAGE WAS NOT STOPPED IN BURA LIKE ONE OF THE OTHER PACKAGES IN THE SHIPMENT THAT WAS TURNED IN TO THE FAA THERE AND IT MOVED ON TO LAXR BY TRUCK. BURA HAD CONTACTED LAXR TO INFORM THEM THAT IT WAS PROBABLY UNDECLARED AS WELL AND WAS STOPPED AND HELD ON 2-15-2018. THIS SHIPMENT WAS NOT LEAKING. LAXR FAILED TO CONTACT OUR DG ADMIN OFFICE THAT THEY WERE HOLDING THIS ADDITIONAL PACKAGE AND NOT UNTIL I CONTACTED THE FAA ON 3-16-2018 THE FAA DID NOT KNOW IT WAS THERE. I SUBMITTED AN UNDECLARED REPORT AT 08:15 (CDT) 2018 ON 3-16-2018 TO REPORT THE PACKAGE SO THEY COULD INSPECT IT AS WELL. I WAS LATER TOLD BY STEVEN REDEKER THAT IT COULD BE RELEASED BACK TO THE SHIPPER.

Description of Events:	The box was found leaking in the sort. Most of the fuel was contained to the limited amount of absorbent material the saturated fibreboard box and the small amount on the floor was recovered. Upon examining the inside of the package we found that the shipper omitted a barrier bag that would have precluded a spill. The FAA was notified; I left an email for Hazmat Mgr. Mike Givens. The shipment has since been inspected. The shipment was properly declared marked labeled & documented.

IN ITEM 30 GC#SPILLAGEGCY WAS SELECTED AS MOST CLOSELY DESCRIBING THE MISSING INNER CONTAINER FROM THE PACKAGE ALTHOUGH THERE WAS NO ACTUAL GC#SPILLAGEGCY OF RADIOACTIVE MATERIAL PER SE. INVESTIGATION SHOWED THE PACKAGE ARRIVED INTACT AT THE FED-EX EXPRESS LOS ANGELES RAMP. EXTENSIVE SEARCHES WERE CONDUCTED AT THE DESTINATION FED-EX EXPRESS STATION BURA USING APPROPRIATE RADIATION DETECTION INSTRUMENTATION AND AT THE FED-EX EXPRESS LOS ANGELES RAMP. VEHICLES WHICH MAY HAVE BEEN INVOLVED IN THE MOVEMENT OF THE PACKAGE FROM THE FED-EX EXPRESS LOS ANGELES RAMP TO THE PACKAGE DESTINATION ECKERT & ZIEGLER WERE ALSO SEARCHED. THE INNER SHIELDED CONTAINER HAS NOT BEEN FOUND AND IT IS ASSUMED THAT IT ENDED UP IN TRASH AND SENT TO A LAND FILL. A report dated 18 December 1975 indicated that 3.12 acres of the 4.27 acre parcel were disposed to the General Services Administration (GSA) and then assigned to the Health, Education, and Welfare Department who transferred it to Northrop University by quit claim deed dated 1 August 1977. The remaining 1.15 acres of the 4.27 acres were purchased by Northrop University in 1984 through a government auction. The 1-acre parcel lease was terminated 25 October 1966 and the site is currently under private ownership.

Description:	RP states, "An unknown amount of sewage has washed ashore on the Dock Weler Beach, which is approx 2-3 miles in length. This caused the beach to be closed down. On 23rd cleaning up of the release began. Suspected that this came from an emergency ejection pipe that is one mile from the beach. The beach is currently cleaned up but monitoring of the beach is ongoing to make sure no more material washes ashore. Crews are also monitoring the Santa Monica Beach."

File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The former Slide System facility is approximately 0.4 acres located in a mixed industrial, commercial area. The former Slide System is a former tenant. Site activities included precision metal stamping, and parts cleaning using a chlorinated solvent [tetrachloroethene (PCE)]. Precision metal stamping activities ceased in 2003, and the Site is currently occupied by a commercial laboratory. The responsible party, 140 Standard Street Partners, LLC (the Owner), has been carrying out site assessment under RWQCB oversight. Site assessment began in 1998. A Phase I Environmental Assessment was completed and reported on October 22, 1998, followed by a soil gas survey performed in May 1999. The results of these investigations determined subsurface release of PCE at the Site. Although the 1999 soil gas survey results outlined the lateral extent of soil contamination, the soil gas survey was limited to five feet in soil depth. At the request of the

MIRRA COTE COMPANY INC (Continued) **S103878776**

Regional Board, the Owner carried out additional site investigations including a deep soil vapor investigation performed in May 2007, an indoor air sampling at the Site on February 6, 2008, and a deep boring to complete vertical soil profile at the former source area in January 2009. Based on analytical data provided in 2007 and 2008 site investigations, the Office of Environmental Health and Hazard Assessment (OEHHA) evaluated health risks. OEHHA staff provided results of evaluation to Regional Board in two comment letters (OEHHA, April 2007 and May 2008). In summary, OEHHA concurred that the cancer risk for commercial workers due to site-related contamination to occupants of the building at 140 Standard Street is 2x10-5, which is within the risk management range (1 in 10,000 to 1 in 1,000,000) for commercial use; and, the non-carcinogenic hazards are not significant. In terms of risk and hazard for future residential land use, OEHHA estimates that rebuilding the site as is would result in cancer risk and non-cancer hazard elevated above the acceptable levels. At this risk level, a deed restriction on land use is required. Depth to the first ground water beneath the property is approximately 92 to 97 feet bgs. The groundwater contaminant plume delineation is limited to data collected from three on-site monitoring wells, among which MW-1 is located at the northwest corner, and wells MW-2 and MW-3 are located at the southwest corner next to the property lines. Trends for PCE show decreasing concentrations in onsite wells, and concurrent increases in concentrations of the daughter products in downgradient well. Concentrations over time demonstrate increasing concentrations of PCE and TCE in MW-2, indicating upgradient PCE/TCE groundwater plume migrating onto the Site. The water quality data provide evidence that conditions are favorable for natural attenuation and breakdown of chlorinated solvents is occurring, due to the presence of fuel hydrocarbons in the regional Chevron El Segundo Refinery fuel plume. Remediation: Not required. Information supporting a no-further-action (NFA) determination is based on the following: 1. As of January 2009, the Owner completed the lateral and vertical delineation in soil, and demonstrates that no residual PCE (nor any other VOCs) is present in soil at the former source area, based on analytical results of soil samples collected from 6.5 ft to 90 ft bgs. Depth to groundwater underlying the site is approximately 92 feet bgs. Therefore, no known PCE soil contamination has been left in-place exceeding acceptable Interim Site Assessment & Cleanup Guidebook limits. 2. A Conceptual Site Model (CSM) was completed and submitted to RWQCB. Human health risk assessments were submitted and concurred by OEHHA. The indoor air for inhalation for commercial workers is considered the only completed pathway, and the health risk is within an acceptable risk management range (10-5). OEHHA also conducted a follow-up review on 2008 indoor air sampling results and concluded the results did not yield an unacceptable health risk. Therefore, no remedy is required for mitigating any potential soil vapor intrusion. 3. The property is located west (ocean side) of the saltwater intrusion barrier system for the West Coast Groundwater Basin. RWQCB adopted Resolution No. 98-18, which removed the municipal and domestic (MUN) beneficial use designation for the groundwater located in this area. 4. As of January 2009, PCE and TCE concentrations in groundwater are at 1 to 2 times of the MCLs. The water quality data provide evidence in favor for natural attenuation due to the presence of fuel hydrocarbons in groundwater, and breakdown of chlorinated solvents is occurring. 5. The Site is located in an industrial area impacted with fuel-related

MIRRA COTE COMPANY INC (Continued) **S103878776**

compounds and chlorinated solvents from sources other than the Site. The presence of free hydrocarbon product at the water table, as well as the dissolved phase fuel-related hydrocarbons, is associated with the known Chevron Refinery groundwater contamination. RWQCB determined no further action for the former Slide System facility with a Covenant and Environmental Restriction on Property, recorded at Recorders office, Los Angeles County, California, dated September 24, 2009.

Description of Events:

Following initial acceptance at air cargo warehouse, consignment 086-14470956, consisting of 3 house waybills totalling 4pcs/91kg, a physical inspection was performed by cargo security screening (TSA requirement)company
contracted by Air New Zealand. Upon opening one package from hawb LAX31560818 (2p/41kg) the hazard labels for class 2 and the markings for proper shipping name and UN classification number were boldly facing screener. Screener stopped and notified Air New Zealand Manager. Notification was made to FAA Hazmat Inspector, Pearl Bello, who informed that shee would inspect the shipment and take photographs the next morning. The shipper was advised that they would not be able to collect the shipment until the FAA Inspector had completed her examination of the shipment and its papers. The shipment was released back to shipper (EGL) on 15 Feb 2008.
